PROFILE SUMMARY

Results-driven Full Stack Developer with hands-on experience in the MERN stack and Python, currently contributing as a Software Developer Intern at Dafy Online Pvt Ltd. Built and deployed production-grade systems including an AI-powered Movie Recommendation Engine (5,000+ titles, 40% faster search) and a full Clinic Management System with RESTful APIs. Adept at optimizing performance — reduced redundant API calls by 25% in a live product. Passionate about writing clean, scalable code and eager to grow in a high-impact engineering team.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL

Frontend: HTML5, CSS3, React.js, Material UI

Backend: Node.js, Express.js, REST APIs

Databases: MySQL, MongoDB

Tools & Platforms: Git, GitHub, Postman, Streamlit

Core Concepts: OOPs, Data Structures & Algorithms, CRUD, MVC Architecture, Authentication

EXPERIENCE

Junior Developer | Dafy Online Pvt Ltd, Cochin, Kerala | Oct 2025 – Present

- Engineered and optimized MERN-based admin dashboard modules (React + Node.js), now used for managing 10,000+ records with DataGrid filtering, pagination, and CSV exports.
- Reduced redundant API calls by 25% through debouncing and request deduplication, directly improving dashboard load performance.
- Identified and resolved critical booking workflow bugs that had caused UX inconsistencies across the platform, improving reliability for end users.

EDUCATION

B.Tech-Artificial Intelligence and Data Science | Erode Sengunthar Engineering College **(2021–2025)**
CGPA: 8.04

PROJECTS

Clinic Appointment & Management System | MERN Stack (React, Node.js, Express, MongoDB)

- Designed and built a full-stack healthcare platform featuring appointment booking, doctor scheduling, patient records, and an admin dashboard — reducing manual booking effort by automating scheduling and report generation.
- Implemented RESTful APIs for all CRUD operations with real-time data sync between frontend and MongoDB.
- Architected the system using MVC pattern for maintainable, scalable codebase; applied JWT-based authentication for secure access control..

Movie Recommendation System | Python, Streamlit, TF-IDF, TMDB API

- Processed 5000+ movies dataset for content-based filtering.
- Reduced search time by 40% using vector similarity.
- Integrated real-time posters and metadata via REST APIs.
- Deployed live application on Streamlit Cloud.
